SUMMARY

Associate Software Engineer with **1 year of professional experience** across two product-based software engineering internships, specializing in Java and Spring Boot backend development. My development journey spans from 2021, growing from academic foundations into a professional contributor who builds and ships real-world, full-stack projects. Across these roles I have contributed to full-stack application development, debugging and troubleshooting, application performance optimization, deployment processes, knowledge-sharing sessions, and technical research. Hands-on with **JAVA, Spring Boot, REST APIs, Docker, CI/CD, SQL**, and modern software architecture principles. Currently expanding my expertise in cloud and DevOps technologies — **AWS**, **Kubernetes**, and modern deployment practices — through self-learning and hands-on implementation, while deepening my knowledge of scalable system design and enterprise application development. Passionate about clean architecture, collaboration, and continuous learning.

EXPERIENCE

Software Engineer Intern · *SUNDEVS PVT . LTD* April 2026 – Oct 2026

- Worked as a Full-Stack Software Engineer Intern using Java and Spring Boot in a product-based development environment.
- Developed software following **OOP**, **SOLID**, and **YAGNI** principles for clean, scalable architecture, reducing code duplication.
- Researched **2+ new technology integrations**, including **PayPal**, **Stripe**, and **Micro Kernel Architecture**, producing documented findings for team review.
- Built plugins using the **Vaadin** framework integrated with **Spring Boot**.
- Secured server-side APIs through hands-on implementation.
- Implemented **Micro Kernel** architecture in plugin-based systems, delivering **2+ published plugins**.
- Built and maintained a **CI/CD** pipeline using **GitHub Actions**, integrated with a **Pterodactyl** managed server environment, reducing manual deployment steps by **95%**.

Software Engineer Intern · *NEXOVA IT SOLUTIONS PVT . LTD* Sep 2025 – Feb 2026

- Worked as a Full-Stack Software Engineer Intern using Java and Spring Boot , React, contributing across the full development lifecycle of **1 major product release**.
- Performed code reviews and debugging, ensuring adherence to **OOP** and **SOLID** principles.
- Containerized applications using **Docker** to streamline deployment and eliminate environment inconsistencies.
- Led the final release of the project, coordinating release activities and aligning **4+ team members** across development and QA.
- Conducted **knowledge-sharing** sessions for the development team on software engineering best practices.
- Served as **Scrum Master** on a rotating basis, facilitating sprint ceremonies and keeping team velocity on track.
- Resolved bugs through focused debugging and troubleshooting, improving application performance and component decoupling.

Full-Stack Engineer · *KreedX Development Club — Startup Tech Community* Jun 2024 – Aug 2025

- Worked as a Full-Stack Developer, collaborating with the community to deliver solutions for **3+ client projects**.
- Built and maintained projects using PHP for clients with specific framework requirements, delivering on time within the agreed scope.
- Developed and customized **2+ client websites** using WordPress, ensuring full responsiveness across desktop and mobile devices.

EDUCATION & CERTIFICATIONS

– BSc.IT & Computer Science · *Science and Information Technology Campus (SITC)* Dec 2026 – Dec 2028

I have successfully completed a 12-month Diploma in Software Engineering. Consequently, I will be joining SITC University at the end of this year to pursue my degree as a top-up programme, entering directly into the second year as my diploma covers the first-year curriculum.

– iCET ICD Developer Programme · *Institute of Computer Engineering Technology (ICET)* Dec 2024 – Dec 2025

Building expertise in enterprise application development using Java and Spring Boot, with strong foundations in Object-Oriented Programming (**OOP**), design patterns, and modern software architecture. Practiced web application development using HTML, CSS, JavaScript, and Bootstrap, and later expanded frontend development skills with React and Angular. Experienced in version control using Git and familiar with MVC coding architecture, Layered Architecture, Microservices Architecture and Event-Driven Architecture.

– G.C.E. Advanced Level — Technology Stream (IT) · *Sri Sumangala National College, Kelaniya* 2021 A/L

Achieved District Rank 161 and Island Rank 1561 in the Technology stream.

- **Git | GitHub 8-Day Workshop** — Pro Code Lab (PCL) View Certificate March 2025
- **Kubernetes For Absolute Beginners** — KodeKloud View Certificate February 2026
- **Docker Foundations Professional Certificate** — LinkedIn View Certificate February 2026
- **Learning Redux Toolkit** — LinkedIn View Certificate March 2026
- **AWS Basics** — KodeKloud View Certificate March 2026
- **Developer Summit '26 | Cloud Builder (AWS | CI/CD)** — UOK View Badge May 2026

TECHNICAL SKILLS

Frontend Technologies | Frameworks | Styling	- **React** , Angular , Next JS , **JavaScript** , **TypeScript** , **HTML5** , **CSS3** , **Bootstrap** , **Tailwind**
Backend Technologies | Frameworks	- **Java** , **Spring Boot** , Node.js , Express.js
Databases	- **MySQL** , MongoDB , **PostgreSQL** , Supabase
Version Control	- **Git** , **GitHub** , **Flyway**
Integrations	- **Stripe** , **PayPal** , **Discord** , **WebSockets** , **Web Hooks**
Tools & Practices	- **Postman** , **Swagger** , **Docker** , **OOP Principles** , **SOLID Principles** , **Agile/Scrum**
Architectures	- **MVC** , **Layered** , **Micro Kernel** , Micro Services , Event Driven (Kafka)
Soft Skills	- Agile Environment Experience , Problem Solving , Team Collaboration , Quick Learning , Adaptability , Debugging & Troubleshooting , Knowledge Sharing , Unit Testing

PROJECTS

Distributed POS System *React | Spring Boot | MySQL | Flyway | WebSocket | Swagger | Redux* *Completed — Intern Project*
– Multi-company POS built with layered architecture, JWT auth, Redux state management, real-time WebSockets updates, and Recharts visualization. Collaborated with **3 developers** using GitHub, managing dependency conflicts across parallel work streams. Validated **20+ REST API endpoints** via Postman and Swagger, and improved backend performance through layered decoupling. Used Docker for containerization.

SunPaste (Paste Management System) *Vaadin | Spring boot | H2 DB | REST API* View Project *Completed — Intern Project*
– SunPaste is a self-hosted platform for sharing code snippets, text, and developer notes, with built-in access controls, a Discord bot, a full REST API, and an admin panel to manage it all. The complete product development, testing, debugging, database management, and design were done by me, and I am responsible for managing the product. From the provided URL, you can see the commercially published product on the **BuiltByBit** platform.

SunBot + Discord Integration *Spring boot | Discord | Open API | Ollama | REST API* View Project *Completed — Intern Project*
– SunBot is a self-hosted Discord bot platform that combines the general-purpose feature set expected of any modern community bot (moderation, engagement, tickets, giveaways, music, custom commands) with deep, first-class integrations for game server hosting platforms and dedicated tooling for developer/addon-support communities. It is delivered as a single self-hosted deployment: one Java process, one admin dashboard, with a core-plus-addon architecture. The complete product development, testing, debugging, database management, and design were done by me, and I am responsible for managing the product. From the provided URL, you can see the commercially published product on the **BuiltByBit** platform.

SunStore (E-com Microkernel project) *Spring boot | Vaadin | Microkernel | REST API* View Project *Completed — Intern Project*
– SunStore is a web-based e-commerce platform built with a Microkernel architecture. It enables users to sell subscriptions and merchandise from their own self-hosted store. The platform handles checkout, licensing, delivery, analytics, and customer management in one place. It integrates with Discord and SunLicense and can watermark every file a customer downloads so leaks can be traced back to the buyer. In this product, I contributed to developing **payment integration via PayPal and Stripe, Placeholder Injection, Cart & Checkout Process, License Management, and Product Catalogue Management**. From the provided URL, you can see the commercially published product on the **BuiltByBit** platform.

Boaththa Power Tools *Next JS | Flowbite | Tailwind CSS | PostgreSQL* *Ongoing — Client Project*
– Developed a responsive Power Tools portfolio website for a client who owns a power tools shop. The client requested a web catalogue with WhatsApp-based order management, so I implemented a solution using Next.js, Flowbite, and Tailwind CSS.
